ACCESS MANAGER

Identity Management Made Simple

The Access Manager makes user account provisioning fast and simple. SCC takes a unique approach to its Identity Management (IDM) suite, giving you the power, speed, and flexibility to ensure success. Traditional IDM tools require months of professional services and developer programming or scripting skills to deploy. Moreover, roughly half of all identity deployments end in failure to connect to more than a simple Windows network. Access Manager brings Identity Management to companies who value their time and resources while solving a critical pain point. You can be up and running in a matter of weeks for a fraction of the cost of other provisioning tools.

▸ **Create, disable, or change any user access using manual or automated rules**

▸ **Monitor and detect changes in user profiles**

▸ **Issue alerts when permissions change without proper approvals**

▸ **Prevent audit findings related to terminated user accounts**

▸ **Succeed in weeks with our fast and easy solution**

Automate All User ID Management

Access Manager automates access changes to any system with a network connection including LDAP servers and databases. This includes any type of creation, termination, or change in access rights or user profile. In addition, multiple actions can be linked together for enhanced IT automation.

Rapid Deployment

Access Manager requires no custom development or programming knowledge. All automation actions are configured via a simple web-based UI, ensuring that your Identity Management deployment will be fast and successful.

Key Features

Automated Provisioning

Automated Termination

Fast and Easy Deployment

No Custom Programming Required

Example Access Manager Use Cases

Provisioning	• Automatically create users when added to HR • Provision new users with a single click
Termination	• Remove from all applications • Notify helpdesk
Transfer	• Alert Manager via email • Modify LDAP and database access
Change in Application Access	• Notify application owner • Change LDAP attribute
