ACCESS AUDITOR

Identity Compliance Made Simple

Key Features

Discover Who Has
Access To What

Automate User Access
Rights Certifications

Enforce Separation
of Duties

Define and Manage Role
Definitions

Alert to Privilege
Changes

Access Auditor addresses the growing concern of user identity auditing and reporting. Designed from the ground up to meet security compliance requirements, Access Auditor automates the discovery, certification, and reporting of user access rights. Let Access Auditor streamline your compliance and governance initiatives:

- ▶ **Consolidate enterprise-wide user privileges into a single repository**
- ▶ **Automate user access rights re-certification efforts with a simple and easy-to-customize workflow that maps to your business**
- ▶ **Initiate and track remediation efforts for inappropriate privileges**
- ▶ **Enforce separation of duties with cross-application rules that generate real-time alerts and reports**
- ▶ **Define and manage enterprise role definitions to highlight excessive user privileges not in a pre-defined role**
- ▶ **Issue proactive alerts to changes in sensitive privileges, users, or applications**

Consolidated View of Access Rights

Access Auditor discovers and imports access rights data from across the enterprise. Using a unique agent-less design, privileges from nearly any resource or custom application can be imported into Access Auditor. SCC's Identity Mapper then consolidates identities from disparate systems to give a unified view of each employee.

Access Auditor analyzes IT resources directly, retrieving its information from the system or application itself. It does not rely upon records maintained by any third-party tool and integrates with any identity management solution.

User Access Re-Certification

The heart of Access Auditor is a powerful certification engine that allows administrators to create multi-phase, customized approval workflows based on any number of user, role, or application criteria. Approvers are automatically notified when certifications are pending and progress is tracked to ensure completion.

Using SCC's workflow, re-certification efforts can now be distributed to managers and business owners across the organization. Access Auditor will automatically issue notification and reminders to keep the review process moving.

Separation of Duties

Separation of Duties (SOD) rules are a key component of any access rights control. Access Auditor provides a highly flexible SOD configuration engine. Any combination of user, role, or application data can be used to create cross-application conflict rules. SOD rules are then used in both reports and real-time alerts.

Compliance Reporting

All privileges discovered across the enterprise are correlated by both user and business application. Reports can show user profiles at any given time, summaries of current and historical reviews, status of certifications and remediation efforts, as well as real-time lists of users with access to specific privileges or applications.

Remediation Tracking

Privileges that are identified as inappropriate are flagged for removal, and remediation efforts are tracked within Access Auditor. Historical reports of certifications provide the evidence needed to show compliance with key user access controls.
